

Nathan Kelion

DATA ENGINEER

✉ nathankelion26@gmail.com | 📧 nathankelion | 🌐 nathankelion | 📍 London, UK

I'm a Data Engineer who enjoys building practical, reliable data solutions that actually get used. I've worked in both startup and enterprise environments, which has pushed me to be hands-on, adaptable, and comfortable owning problems end to end. I like working closely with others, whether that's collaborating with stakeholders or supporting junior team members, and I'm always looking for ways to keep improving both technically and professionally.

Work Experience

IAG Loyalty

DATA ENGINEER

Aug. 2025 — Present

- Led the transition from SQLMesh Cloud (TCloud) to a self-hosted AWS platform, creating a repeatable, lower-cost approach for adoption across data teams.
- Delivered data products for Pricing and Finance, becoming a subject matter expert on their data and business logic and enabling accurate valuation of reward flights and settlement with airline partners.
- Built and optimised ELT pipelines and data models using Snowflake, SQLMesh, Python, and AWS, improving the accuracy and timeliness of downstream reporting.
- Contributed to the migration from legacy systems to a modern AWS data platform, using Terraform to standardise and scale infrastructure.
- Acted as a Data Quality Steward, defining and monitoring standards that improved trust in key datasets.
- Collaborated cross-functionally within a product squad to deliver iterative, business-aligned data solutions.

Pirical

DATA ENGINEER

Mar. 2024 — Jun. 2025

- Built and maintained ETL pipelines using Python, Pandas, SQL, and AWS, delivering accurate and timely data updates for clients.
- Implemented data validation and QA processes to improve reliability of client datasets.
- Worked directly with clients to gather requirements and translate business needs into data solutions.
- Produced clear data specifications and documentation to support delivery and stakeholder alignment.

Kubrick Group

DATA PRODUCT CONSULTANT

Dec. 2022 — Feb. 2024

- Gained an understanding of data technologies including Python, SQL, Alteryx, and Power BI/Tableau.
- Developed soft skills such as stakeholder management, business process optimisation and end-to-end lifecycle of requirement engineering.
- Gathered and interpreted requirements to deliver several data projects with an Agile methodology to meet business needs.

Community Security Trust

NATIONAL STUDENT SECURITY COORDINATOR

Jun. 2021 — Nov. 2022

- Provided expert advice on antisemitism and anti-Jewish terrorism to a range of stakeholders including police, on-site security, university management, NGOs, and student bodies.
- Supported and guided victims of antisemitism as a first point of contact.
- Managed a team of nationwide volunteers.

Leadership and Volunteering

Community Security Trust

VOLUNTEER INSTRUCTOR AND TEAM LEADER

2021 — Present

- Instructor of specific security methods and techniques, including close combat, within the counter terrorism security space.
- Leader of a team of security personnel, providing cover for a variety of events.

Kol Tov

PARTNER

2021 — Present

- Integral part of a charitable acapella group that has raised £100,000 for charity.
- Support client engagement and event delivery to ensure impactful, professional performances.
- Contribute to musical direction, arrangements, and rehearsals.
- Assist with bookings, logistics, and coordination with organisers and charities.

Education

University of Leeds

BSc (HONS) HUMAN PHYSIOLOGY, 2:1

2018 — 2021

- Dissertation (Grade – First): ‘The effects of left ventricular stretch on the mechanical and electrical activity of the heart and how endocardial irrigation with Lugol’s solution modulates these effects.’

Watford Grammar School for Boys

A LEVELS: BIOLOGY A*, CHEMISTRY A, MATHS A

2011 — 2018

Qualifications and Training

- Quasafe Level 3 Award in Emergency First Aid at Work (RQF), including Management of Catastrophic Bleeding
- Certified Krav Maga Instructor
- ABRSM Grade 8 Violin (Distinction)

Personal Projects

Facial Image Alignment and Visualisation Tool

2026

- Developed a Python computer vision tool, inspired by my own Invisalign journey, to align facial images and generate consistent progress visualisations.
- Used OpenCV and MediaPipe for facial landmark detection, image alignment, morph video generation, and side-by-side comparison outputs.
- Enhanced robustness with alignment quality checks, error handling, and automated output generation.

Mortgage Calculator Web Application

2024

- Developed a Python and Streamlit web application to calculate mortgage repayments and affordability based on borrowing assumptions and desired monthly repayments.
- Used Bank of England yield curve data to support repayment modelling, affordability estimates, and Stamp Duty calculations for first-time buyers and standard residential purchases.
- Enhanced robustness with automated data updates, improved calculation accuracy, refactoring, test coverage, and clearer validation/error handling.

BBC Good Food Scraper and Web Application

2023

- Developed an end-to-end Python data project to improve recipe filtering based on macro-nutrient targets and available ingredients.
- Used Python, SQL, GitHub Actions, and AWS RDS to automate weekly collection and storage of recipe data in a cloud-hosted database.
- Created a Streamlit web application to give non-technical users an interactive way to search and filter recipes.
